

Smart Mobility 2010: A Call to Action for the New Decade

Caltrans, in partnership with US Environmental Protection Agency, and in collaboration with other state project partners - the Governor's Office of Planning & Research and the California Department of Housing & Community Development - completed *Smart Mobility 2010: A Call to Action for the New Decade*. This new approach to integration of transportation and land use addresses long-range challenges and provides short-term pragmatic actions to implement multi-modal and sustainable transportation strategies in California.

The intent of this three-year effort was to develop a planning framework that will help guide and assess how well plans, programs, and projects meet a definition of "smart mobility". The goal is to ensure applicability of the framework for Caltrans as well as for partner agencies. It will be used to guide development of products as well as assess how well products meet "smart mobility" principles and

criteria. Ideally, it should be able to be applied to various levels of plans, programs, or projects (e.g., Regional Transportation and Blueprint Plans, General Plans, corridor plans, specific development proposals, etc.) in all parts of the state (i.e., urban, suburban, and rural).

Smart Mobility 2010 provides new tools and techniques to improve transportation by using performance-based measures to achieve sustainable outcomes. By considering land use place types and modified performance measures, the benefits of smart mobility can be realized, both now and in the future. Further, it sets the stage for the California Interregional Blueprint and data improvement efforts that will transform transportation decisions.
